

Welcome to the innovation hub!

MedTech start-up

Founded in 2015

Sleepiz AG (Ltd.) is a Zürich based startup and an ETH Spin-off with a mission to provide patient-centric disease management through seamless integration of contactless monitoring into people's homes. Sleepiz leverages the power of sleep insights with a device that is simply placed next to the bed.

The device operates in a non-contact fashion and measures movements originating from heart contractions and breathing patterns, as well as body motions with medical grade accuracy. While currently focusing on respiratory illnesses, Sleepiz aims to improve people's lives by creating the future of healthcare.

Sleepiz is touching lives without touching.
